Create the future

Creatr XL / Double the fun, Triple the height

Leapfrog 3D Printers literally took the Creatr to a higher level by making the Creatr XL. The Creatr XL is twice the height, tripling the Z value to an immense 60 centimeters! Building large industrial prototypes or finished products is now possible due to the massive build volume of 230x270x600 mm. With the heated bed and dual extruders the Creatr XL allows you to print with various materials and colours. Explore the versatile design possibilities!

As all of our 3D printers are plug & play, starting your XL print adventure is easy. The Creatr XL is fully assembled and pre-calibrated when it arrives at your doorstep, packed in a sturdy crate. Just install the software, insert the filament and you'll be ready to make your first object in about 45 minutes.

Dimensions

Outer dimensions:
500x600x500 mm

Layer resolution:
50 micron

Buildsize

Build volume(LWH):
Single extruder print:
23x27x60 cm
Dual extruder print:
20x27x60 cm

Max print. volume:
37.2 liter

Print speed:
10 - 60 mm/s

Travel speed:
10-350 mm/s

Positioning precision:
XY: 16.9 micron
Z: 0.05 micron

Nozzle diameter:
0.35 mm

Materials

MAXX economy
MAXX professional
MAXX exotic
1.75mm filaments

Usage costs:
0,035€/cm³

Software

Simplify 3D (incl)

File format:
STL, G-code

Electrical

Connection:
100-240 V

Connectivity:
Serial communication
